
MAINSTREAM
fiber networks

Why Fiber?

Mainstream Fiber Networks is one of the only internet providers in Indiana to offer true fiber to the home and business. Unlike traditional internet service providers, we don't simply stop at the curb or the pole, but rather run the fiber all the way to your desired location. This ensures that your home or business receives the fastest speeds with the most reliability.

Future Proof

The world's technology is constantly changing, but fiber is considered to be future proof. Because data is transmitted at the speed of light, it will allow for substantial speed improvements by upgrading equipment, long before the fiber itself would ever need to be upgraded.

Information at the Speed of Light

Fiber optic cables have significantly more bandwidth than traditional services because data is transferred at the speed of light through glass fibers no thicker than a strand of human hair.

100% Fiber, Delivered Directly to your Business

Mainstream Fiber understands that businesses need the best broadband connection possible. We offer a complete, unbroken, fiber connection directly from our network to your location. This ensures the fastest, most reliable speeds which only fiber can provide.

It has been estimated that the extension of high speed internet access to our rural areas will provide as much as

$12 billion

in economic benefit to Indiana residents and businesses over the course of 20 years.

Agriculture

Connectivity enables precision agriculture, with equipment providing live data to boost crop yields, manage soil nutrients, monitor livestock, and operate driverless vehicles.

Job Growth

Fiber optic internet provides more work from home opportunities and allows for more job growth in general, as the increased speed allows seamless audio and video streaming, calling, and file sharing.

Telemedicine

Fiber enables remote health services, including follow-up video calls, long-term condition management, medication tracking, therapy, and off-site specialist consultations.

Education

High-speed fiber internet enables seamless communication, virtual field trips, and online classes for students and teachers.

Economy

Fiber revitalizes rural communities and promotes migration by providing access to services, entertainment, remote work, and education typically found in urban areas.

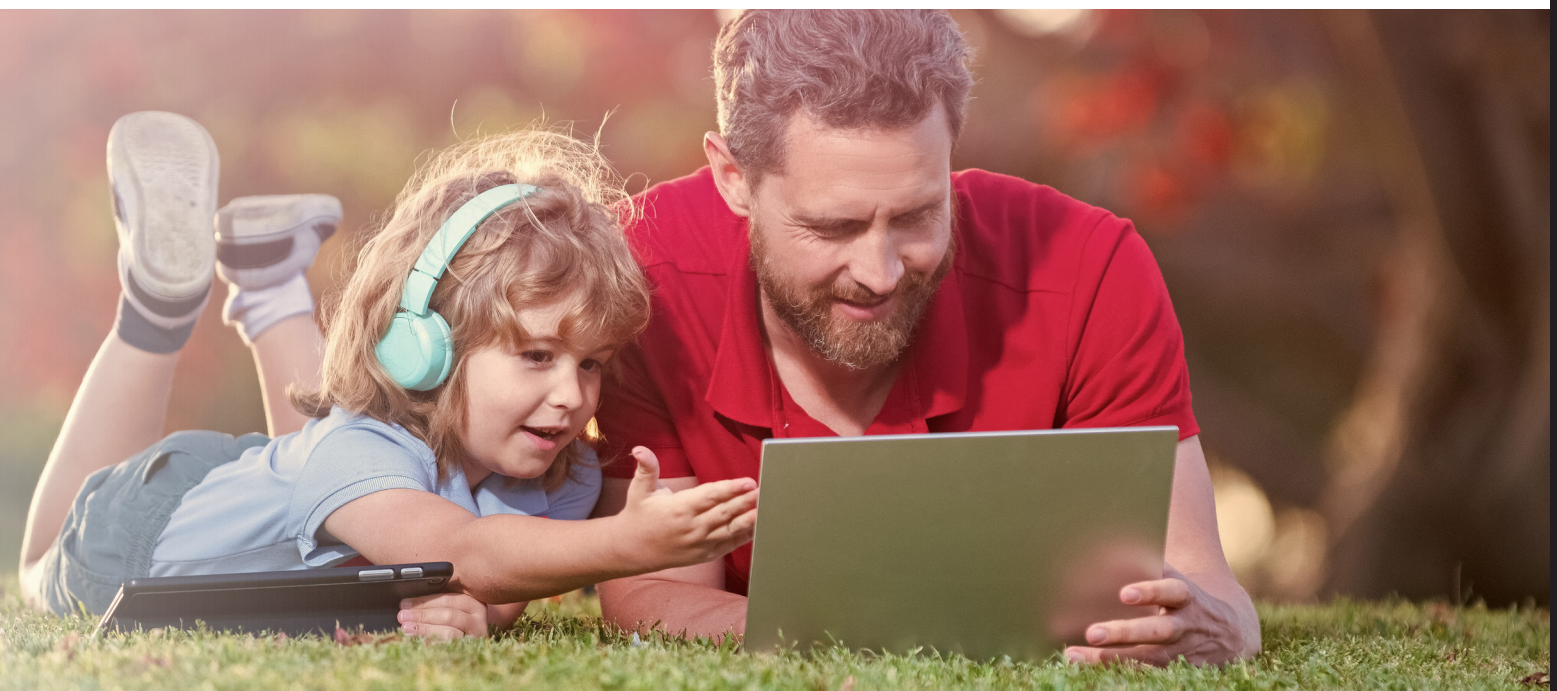

Emergencies

First responders will be able to connect to wifi hotspots on their runs, allowing them secure consistent access throughout your county. As long as your community is connected, so are they.

15 Percent

The percentage of United States job postings that are fully remote. Hybrid options have also risen to 23% of new job postings.

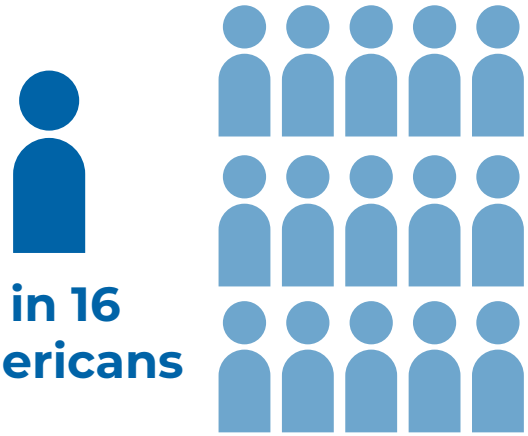

4.9 Percent

The average increase in property value to homes that have access to Fiber direct to the home. For Multi dwelling units the value increases by 13%.

22 Million

The number of US employees who regularly work at home. This is almost double the amount of employees who worked remotely in 2018.

1 in 16 Americans

94 Percent

of school districts are working to implement learning devices. Of these, more than half already provide a device for K-12 students.

Who We Are

At **Mainstream Fiber Networks**, our focus is making sure that rural communities are operating on a level playing field with larger, highly populated urban centers. The challenge for smaller communities is securing the necessary funding for new infrastructure projects. Our team partners with the community to explore all potential funding opportunities that may be available both within and outside of the community and has been successful in securing funding for major fiber projects in several counties throughout Indiana.

Hoosier Owned and Based

Our goal at Mainstream Fiber Networks is to provide access to reliable and affordable high-speed fiber optic internet to rural communities throughout Indiana. Being Hoosiers ourselves, who live and work in the communities we serve, we understand that access to highspeed fiber optic internet is a key factor for all Hoosier communities and businesses, but specifically in rural areas.

Proven Success in Network Deployment

As the first fiber-to-the-home (FTTH) provider in the area, Mainstream Fiber Networks has deployment experience with a proven track record of meeting and exceeding project timelines and service area coverage. In Harrison County, Mainstream was able to deploy 355 miles of fiber in 15 months to deliver a significant amount of the population access to high speed fiber internet in under two years.

Facilitate Funding Assistance

At Mainstream Fiber Networks, our focus is making sure that rural communities are operating on a level playing field with larger, highly populated urban centers. The challenge for smaller communities is securing the necessary funding for new infrastructure projects. Our team partners with the community to explore all potential funding opportunities that may be available both within and outside of the community.

Provide Comprehensive Infrastructure

Our team understands how critical high speed fiber internet is to everyday operations for a home, business, industry, town, or the entire county. As part of our partnership with the community, we work to identify the areas where access to broadband will make the largest impact. As part of futureproofing our network, our engineering team designs the mainline of fiber to help support the growing demand from the community for years to come.

Our History

2006 Mainstream Fiber Established

Bryan Gabriel established a wireless internet service provider, and as he invested in fiber optic technology, this wireless internet venture gradually evolved into a fiber optic internet company. This company would later become Mainstream Fiber Networks.

2012 Brown County Schools Project

The goal of this project was to ensure that all students in Brown County Schools have access to fast and dependable internet. Soon after, the business began expanding its fiber-optic network throughout Brown County, laying 21 miles of fiber-optic cable.

2015 Harrison County Loop Project

Mainstream Fiber collaborated with the Harrison County Community Foundation and the Chamber of Commerce to begin construction on a massive 115-mile fiber optic loop that supplied the service throughout the whole county.

2018 Expanding Coverage

After completing the Harrison County Loop Project, Mainstream Fiber began expanding into neighboring Floyd County, connecting 100 neighborhoods and 8000 homes, before also beginning expansion into Warrick County.

2019 State Sponsorships

Mainstream Fiber applied and was awarded with an Next Level Connections grant for both Benton and Floyd County during Round 1. Over the following years, Mainstream Fiber would apply in every additional round.

2023 Growth and Development

Mainstream Fiber aims to continue growing, expanding our network, and providing affordable internet solutions throughout all of Indiana.

Mainstream Fiber Networks has tangible success in successfully obtaining state grants, which have played a crucial role in advancing our mission, fueling growth, and enabling us to make a lasting impact in our industry and to Hoosiers throughout the state. During the 3 rounds of Next Level Connections (NLC) Broadband funding, we were awarded 10 grants for a total of nearly $19 million, with local matches of approximately $19 million.

Next Level Connection Grants Received

NLC Round 1

Benton County

$3 million with

Regional Responses

"My installer was very kind and understanding of my limited tech knowledge. He was also very friendly, personable, professional, and efficient."

Kimberly, Nashville, IN

"Thank you for being so professional to us. The internet is great now! The old service was spotty and generally slow. Your service is very appreciated."

Ken, Corydon, IN

"I love your company and thank you so much for the exceptional service. It truly is local service from local people that makes America great. The installer was phenomenal. He answered all of my questions and had things set up in no time."

Larry, Corydon, IN

"The installer has been very patient throughout the process and was a pleasure to work with."

Shirley, Palmyra, IN

Terms and Conditions apply, visit website for full details. Enrollment and maintenance of both paperless billing and automatic payments with a stored bank account is required, otherwise a monthly service charge increases by $10 for all plans. One-time installation fee of $50 to $100 may apply for select packages and products. Taxes and fees are subject to charge. Visit website for full terms and conditions.

Residential Services

Included Free Of Charge In All Plans

CommandIQ
A free network monitoring app for use on your phone. Shows your network's wireless signal strength, speed test data, and allows the use of ProtectIQ and ExperienceIQ.

ProtectIQ
ProtectIQ protects your network against viruses and ransomware by using a constantly updated database to ensure that your internet browsing is fast and worry-free.

ExperienceIQ
ExperienceIQ is a suite of flexible network and parental controls. It can monitor what sites are being browsed, put time limits on specific sites, or completely block access to sites and topics. A great way to provide peace of mind while your family is browsing.

Router
All internet plans include a router, ensuring consistent connectivity and a secure, reliable network for your devices.

Installation
Up to 1000 ft from exisiting fiber lines will be connected direct to the home will be free.

Residential Services

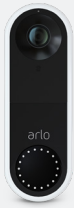

Mainstream Voice

$20/mo

Keep your existing number and enjoy a VOIP home phone with benefits like Caller ID, nationwide calling, and call forwarding/waiting.

Mainstream Security

Enjoy unlimited storage for all your security cameras in stunning 2K resolution, allowing you to save and access high-quality footage, up to a month, without worrying about running out of space.

Doorbell Camera

Make sure all your doors are covered so your home remains secure.

$15/mo

Indoor Camera

Keep watch over the grandkids and your pets remotely, so there are no worries while away.

$15/mo

Outdoor Camera

+ Solar Panel

2K resolution with noise and echo cancellation for perfect outside clarity.

$20/mo

Learn how to Stream DIRECTV over your Mainstream Fiber connection!

Residential Services

Indoor WiFI Booster

Boost your signal to eliminate frustrating dead zones and ensure strong, reliable coverage throughout your entire home. By enhancing your network's reach, you can enjoy seamless streaming, faster downloads, and uninterrupted connectivity in every room.

$5/mo

Pools & Patio

Outdoor WiFI Booster

Enhance your backyard experience with internet coverage that's specifically designed to deliver strong, reliable connectivity to outdoor spaces like pools, patios, decks, and garden areas. Enjoy the freedom to work, play, and relax outdoors without worrying about signal drops or buffering.

$15/mo

Barns & Workshops

Outdoor WiFI Booster

Stay connected from your barn to your workshop with extended WiFi coverage that goes the distance. With the ability to stretch your signal up to a mile, you can maintain a strong, stable internet connection even in remote outbuildings or hard-to-reach areas of your property.

$30/mo

Traditional Phone Lines

$24.95/mo

Experience hassle-free calling with our straightforward phone line handoff! Simply plug in your existing equipment, whether it's a standard single-line phone or a multi-line setup, and you're ready to go. While we provide the connection, we empower you to manage your own setup without the worry of troubleshooting. Enjoy the flexibility and independence of a system designed for easy integration!

Mainstream Fax

$9.95/mo

Streamline your document management with our cutting-edge eFax and additional options for traditional fax services! Enjoy the convenience of sending and receiving faxes digitally, reducing paper waste and saving time.

SIP Trunking Available Upon Request

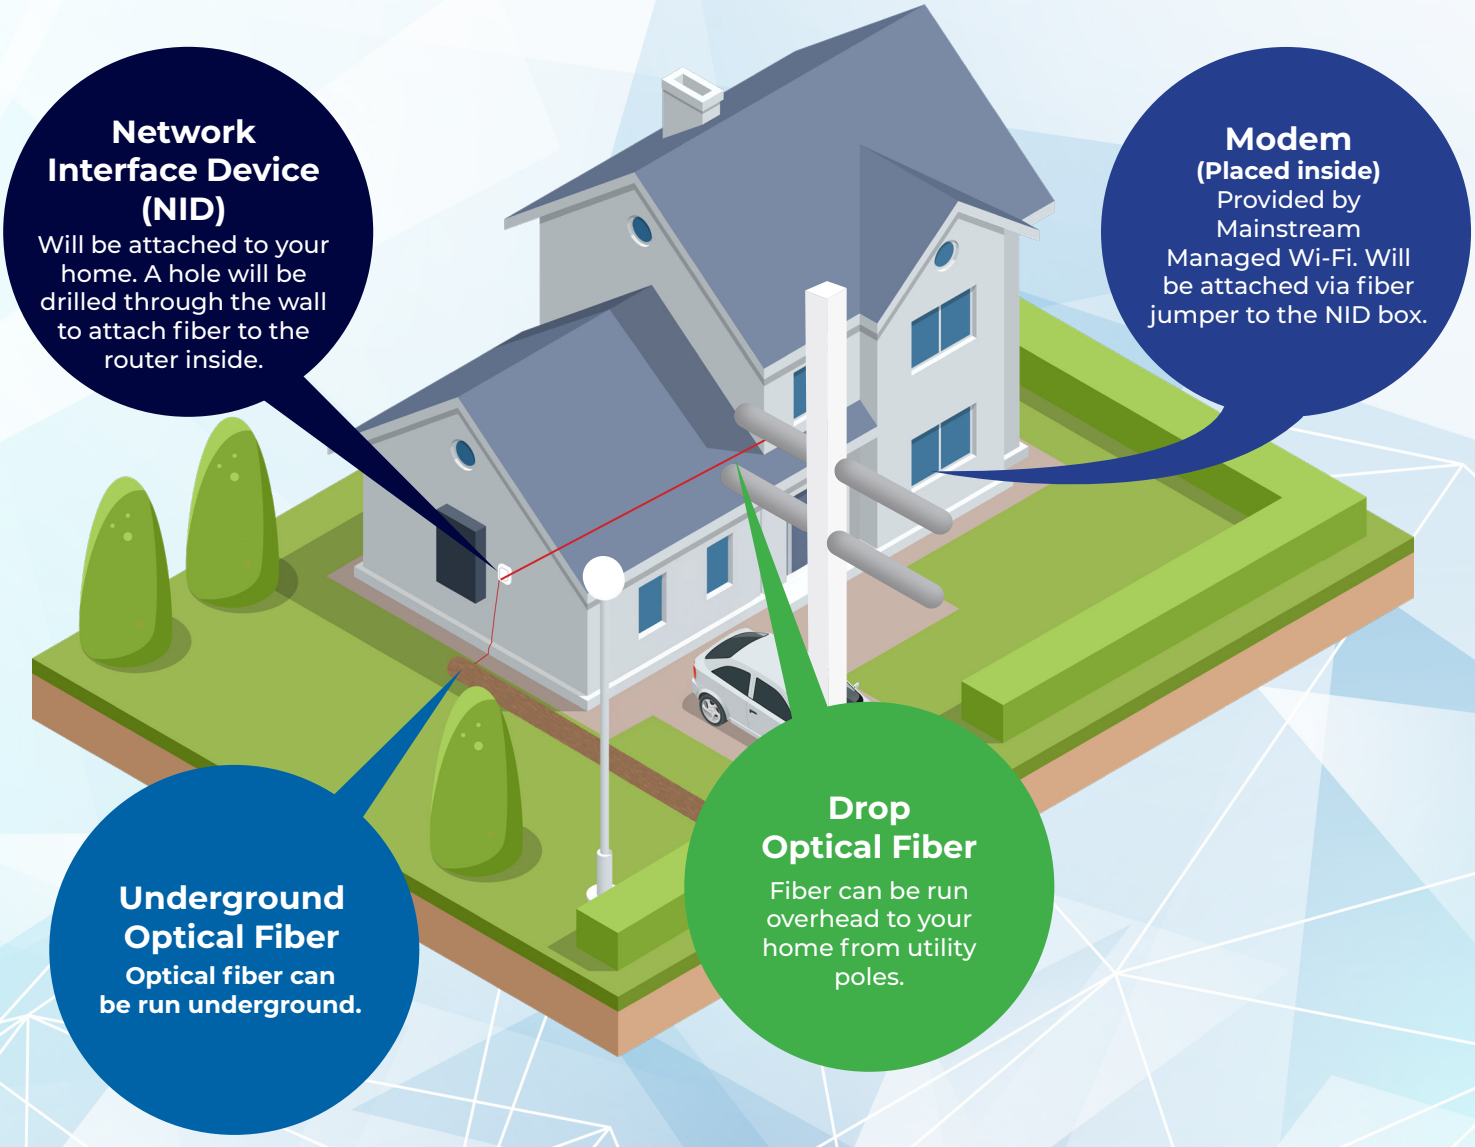

Upgrade your business communications with our powerful SIP trunking solution! Say goodbye to costly traditional phone lines and hello to flexible, scalable connectivity that grows with you. Our SIP trunking not only reduces your communication costs but also enhances call quality and reliability.

Our 100% fiber network is being built throughout Indiana using a combination of aerial (on new and existing poles) and underground construction.

After the construction, this network will be rigorously tested by our network technicians until it's ready for end-users.

How is fiber installed to a location?

Once our lines are tested and ready to be installed to your home or business, a line will be pulled directly from our main route to the location. An installer will determine the best location to install a Network Interface Device (NID) on the outside of your building. Inside the building, the line will then be connected to a router. The process can take up to 120 days from start to finish. This includes splicing into newly constructed mainline fiber and testing your connection.

Underground vs Aerial Installation

Mainstream Fiber Networks can bring fiber broadband to your home or business through underground or aerial means. Many factors go into determining which method is chosen, such as your home's location, the geography of the surrounding area, the distance between the home or business and the road, and distance between the home or business and other service locations. When possible, we try our best to follow the route that other utilities follow into the home or business.

We assist local leaders in bridging the digital divide with full support at every step.

As Indiana's first community-focused 100% fiber provider, we're committed to bringing broadband to underserved areas, recognizing its vital impact on education, healthcare, jobs, economic growth, and future technologies.

Economic and Community Development

As the first fiber-to-the-home provider in the area, Mainstream Fiber Networks has experience deploying in multiple counties. In Harrison County, we expanded our initial 115-mile project to 355 miles in just 15 months, providing high-speed fiber internet to many unserved and underserved residents.

Creating Broadband Ready Communities

With in-house engineering expertise and community feedback, Mainstream Fiber designs networks tailored to your needs, connecting government, businesses, and key assets with cutting-edge, future-proof technology.

Broadband Committee Formation

When considering a broadband fiber expansion plan, there are several steps a community can take to help ease potential concerns that may arise around construction, permitting, and implementation of a broadband fiber expansion project. Many options at the state and national levels exist for communities to represent their preparedness toward a broadband infrastructure project. Mainstream Fiber Networks can prepare your group for this process.

Infrastructure Planning and Engineering

With our in-house engineering and experience in network development, we use feedback partnerships within the community to create a network designed from the ground up to best serve your community. Our network is always built with the most up to date technology and with a future proof infrastructure, while also providing home fiber for community residents, community businesses, and critical community assets.

Better Internet Builds
Better Communities

Benton County

Benton County, Indiana, has made significant strides in expanding fiber internet access to its residents by working alongside Mainstream Fiber Networks to provide over 70% of the community with access to fiber optic internet.

Blackford County

Fiber internet availability in Blackford County, Indiana is currently limited, but is one of our primary focuses for expansion in 2025. Recently, we have begun constructing and connecting homes in Montpelier with access to fast, reliable, fiber optic internet, and look forward to providing this service to even more of the county.

Brown County

Mainstream Fiber Networks' first project was to connection Brown County Schools to fiber optic internet, and afterward, we began expanding out from the schools to the neighboring communities. Being a Brown County founded business; Mainstream takes great pride in providing internet to its home county.

Crawford County

Mainstream Fiber networks has started connecting residents in Crawford County, now providing over 60% of residents in the county with access to broadband internet service, and we look forward to continuing to grow our service along with the county.

Floyd County

In 2018 we began to extend our Harrison County network to residents in western Floyd County, and later that year we were able to secure a partnership with the State of Indiana to continue growing our network into the eastern part of the county.

Gibson County

Through the assistance of a partnership with the State of Indiana, Mainstream Fiber has begun building our network into Gibson County, connecting our first homes in Q4 of 2024, we look forward to continue bringing new residents reliable internet service.

Harrison County

Over 115 miles of fiber optic cable now connect 100+ neighborhoods and nine towns. Mainstream Fiber Networks and the Harrison County Community Foundation RESO began planning the 115-mile network in 2016, completing the mainline infrastructure in September 2018. Since then, over 355 miles have been built based on demand, serving approximately 8,900 homes and businesses. The network continues to grow, with strong community involvement throughout the project.

Pike County

Working alongside the state, Mainstream Fiber has been able to bring fiber optic internet to hundreds of residents throughout the county, and we are continuing to expand our service as we move into 2025.

Posey County

Through the help of a partnership with the State of Indiana to serve Posey County with fast, reliable, fiber optic service, we have been working tirelessly to construct a robust broadband network for the county. In 2024, areas in Posey County were able to finally experience gigabit speeds, and we are continuing to expand throughout the county.

Warrick County

Working alongside Warrick County to provide residents with fast, reliable fiber internet since 2018, Mainstream Fiber has been able to increase access to broadband services in the area by connecting multiple communities.

Washington County

Mainstream Fiber has been serving Washington County since 2018, and have recently started expanding further into the county, specifically in the town of Salem and the surrounding area, where our network is currently being constructed.

Our network is expanding, driving progress to build a stronger, more prosperous Indiana.
